

# Explore the power of Argon 120<sup>kw</sup>

One of the lightest  
and most powerful  
**marine electric motors**  
ever created.

# Argon EP120

EXTREME POWER

Outboard

Power

**120** kw

Motor torque

**200** Nm

Weight

**130** Kg

Visit the website

The Argon EP120 is the most powerful outboard in the range.

120kW of rated power, 200Nm of torque at the shaft and 130kg of weight are just some of the features that make this outboard the right motor for fast displacement and planing boats up to 10m.

Motor and electronics are run at 400V high voltage and are water-cooled through an internal cooling circuit designed to maximise efficiency in terms of heat exchange.

Power & torque	120 kW a 6000 rpm / 200 Nm at shaft
Nominal Voltage	400 V
Cooling system	Motor and inverter water-cooled
Protection	IP69
Dimensions LxWxH	950x360x1200 mm
Weight	130 kg (motor only without bracket)
